

Nearest-Neighbor Matching: Envelope $\leftrightarrow$ FDFD Honeycomb TM, $\theta = 1.12^\circ$, $(m,n) = (30,29)$, Γ_m point

Nearest-neighbor matching:
 mean $|\Delta\omega| = 16 \times 10^{-6} c/a$
 max $|\Delta\omega| = 44 \times 10^{-6} c/a$
 = 0.5% of envelope BW

Envelope: 50 modes
 FDFD in window: 65 modes
 (30 from other folded bands)
